

Third dose recommended for severely immunosuppressed

The JCVI has recommended that people who were severely immunosuppressed at the time of their first or second Covid-19 vaccination should be offered a third dose. This is an extra 'top-up' dose in response to evidence showing that they may not have responded as well to the vaccine as others and will therefore have lower levels of protection against Covid-19. It includes people with leukaemia and advanced HIV and people who have had recent organ transplants.

Consultants have been asked to identify eligible patients and recommend when the best time would be for them to have their third dose. Patients will be contacted either by their consultant or GP to arrange their vaccination, starting from mid-September.

FAQ

Why are some people being offered a third dose of the vaccine?

The JCVI has recommended that people who were severely immunosuppressed at the time of their first or second Covid-19 vaccination should be offered a third dose. This is an extra 'top-up' dose in response to evidence showing that they may not have responded as well to the vaccine as others and will therefore have lower levels of protection against Covid-19. It includes people with leukaemia and advanced HIV and people who have had recent organ transplants.

When will people who are severely immunosuppressed be offered their third dose?

Consultants have been asked to identify eligible patients and recommend when the best time would be for them to have their third dose. Patients will be contacted either by their consultant or GP to arrange their vaccination, starting from mid-September.
